

Homework #3

AMS 507, Fall 2025

Due September 18

1. Let the three independent events A_1 , A_2 and A_3 be such that $P(A_1) = P(A_2) = P(A_3) = 1/4$. Find

$$P[(A_1^c \cap A_2^c) \cup A_3].$$

2. Prove that if $P(B|A) = P(B|A^c)$, then A and B are independent events, and give an intuitive statement as to why this result seems reasonable.
3. Bowl 1 contains 3 red chips and 7 blue chips. Bowl 2 contains 6 red chips and 4 blue chips. A single chip is drawn from a randomly selected bowl.

- (a) What is the probability that this chip is red?
- (b) Given that the chip is red, what is the probability that it came from bowl 2?
- (c) Let $A = \{\text{the chip is red}\}$ and $B = \{\text{the chip came from bowl 2}\}$. Are they independent?

4. For each of the following, find the constant c so that $p(x)$ satisfies the condition of being a pmf of X .

(a)

$$p(x) = c \left(\frac{2}{3}\right)^x, \quad x = 1, 2, \dots$$

(b)

$$p(x) = cx, \quad x = 1, 2, 3, 4, 5, 6$$

5. Let X have the pmf $p(x) = x/5050$, $x = 1, 2, \dots, 100$.

(a) Find $P(X \leq 50)$.

(b) Show that the cdf of X is $F(x) = [x]([x] + 1)/10100$ for $1 \leq x \leq 100$, where $[x]$ is the greatest integer which is less than or equal to x .

6. Let $p(x) = 1/2^x$, $x = 1, 2, \dots$ be the pmf of X . Let $Y = X^3$.

(a) Find the pmf of Y .

(b) Find the cdf of Y .

7. Two distinct integers are chosen at random and without replacement from the set of integers $\{1, 2, 3, 4, 5, 6\}$. Let X be the absolute value of the difference of these two numbers. Find $E(X)$ and $\text{Var}(X)$.
8. Suppose X and Y are independent random variables such that $E(X) = 5$, $\text{Var}(X) = 9$, $E(Y) = 3$ and $\text{Var}(Y) = 25$. Find $E(U)$ and $\text{Var}(U)$ where $U = 2X - Y + 1$.

9. Let X be a discrete random variable whose range is the nonnegative integers. Show that

$$E(X) = \sum_{k=0}^{\infty} [1 - F(k)]$$

10. Suppose that $p(x) = 1/5$, $x = 1, 2, 3, 4, 5$ is the pmf of X . Find

- (a) $E(X)$
- (b) $\text{Var}(X)$
- (c) $E[(X + 2)^2]$
